Subject:	CORTX Monthly News & Updates

Here's your August CORTX Newsletter.

Meet the Architect
Join us Thursday, August 5th at 8am Pacific for Meet the Architect. As long as the world has stored data (even as far back as clay tablets!) it has needed mechanisms to protect that data from the inevitable failures of the storage media. Seagate storage architect John Bent will describe the history of data protection and present a deep dive into declustered parity (a method of data protection that scales with the number of storage media).
And if you missed last month's session, "How to Motr," with Patrick Hession, it is now available on Youtube.

OVA release – 2.0.0 is available!
We have released 2.0.0, and it's now available. A few of the updates in this release:
- Support for erasure coding
- Cluster Bootstrap Management Service
- Cluster: Bootstrap IO Service
- Copy Objects feature
- S3 IAM User Management
- CSM Audit Logs
- Ability to create a single node cluster
- And more- read all about it here.

Open Source Partnerships
We are incredible excited to announce, thanks to the the support of Seagate Gov, that we have become sponsors of both the SODA Foundation and Rocky Linux.

CORTX at ISC
Sai Narasimhamurthy presented a talk at ISC-HPC on *Advancing Object Storage for Extreme Scale*. His slides are available here.

CORTX at Supermicro
Seagate Senior Engineering Director Colin Presly discussed CORTX during a SuperMicro panel about hardware enhancements driving software-defined storage. Check it out here.

Singapore Hackathon

The submissions are in, and our Singapore CORTX Integration challenge is wrapping up! Winners will be announced August 6th. Visit the Devpost hub to get all the updates!

Best,
Rachel Novak (she/her)
